

How do you assess your candidates?

A calm, structured experience for candidates and a clearer decision-making foundation for recruiters.

AI and technology are reshaping recruitment

Recruitment processes often rely on time-consuming manual reviews of applications. This has become more difficult as workforces grow more mobile and labour markets move faster. A CV also reflects a candidate's own account of their skills, offering limited insight into how they will perform in the role. Conscious and unconscious bias can further affect the quality and consistency of decisions.

PeerPilot offers a seamless, engaging and unbiased candidate assessment

PeerPilot invites applicants to take part in an online workshop where they work in teams to solve a job-relevant business challenge. The structured process is engaging and gives every participant an equal opportunity to demonstrate their skills. By creating a more level playing field, PeerPilot can reveal strong candidates whose abilities may not be visible in a conventional application.

The automated process provides meaningful candidate evaluation data

The process produces behavioural data from realistic candidate interactions. Contributions are evaluated and ranked through peer review.

Impact - the candidate's ability to communicate clearly

Drive - the candidate's level of motivation

Collaboration - the candidate's ability to work effectively with others

PeerPilot leverages the entire recruitment process and delivers instant value

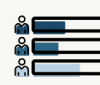

Facilitate automated evaluation and ranking of candidates

Decrease time-of-hire and improve candidate fit

Directly observe team dynamics and motivation

Identify candidate performance in a realistic scenario

Remove bias and establish consistency in evaluation

Get started in three easy steps

01 Select a business case

02 Import your candidates

03 Receive candidate assessments
